Vision

Bell Material Solutions envisions a world where industrial waste is eliminated through circular supply chains.

Our mission is to repurpose discarded materials into valuable resources, minimizing carbon footprints for global brands.

Market Opportunity

The global circular economy is projected to reach over \$4.5 trillion by 2030.

Brands like Nike, Adidas, and Apple are under mounting pressure to cut emissions and demonstrate sustainability leadership.

BMS is uniquely positioned to partner with these corporations to meet regulatory and consumer-driven ESG targets.

Business Model

We operate on a hybrid model of material resale, service fees for processing, and ESG data reporting subscriptions.

Revenue scales as more regional hubs are established, reducing logistics costs and increasing supply chain efficiency.

Traction

Early-stage partnerships with regional manufacturers have already diverted significant waste from landfills.

Our pilot hub processed 500+ tons of material within its first six months, demonstrating strong demand.

Financial Projections

Revenue is projected to grow from \$500k in Year 1 to \$10M by Year 5 with 25% gross margins.

Capital efficiency is achieved through regional hub replication and leveraging grant support for infrastructure.

Impact

Each ton diverted avoids ~2.9 tCO₂e emissions.

BMS not only creates financial value but also delivers measurable ESG metrics aligned with GRI, SASB, and SEC frameworks.

The Ask

We are seeking \$2M in blended financing (grants, loans, equity) to scale operations and expand to three regional hubs.

Investors will gain early access to a scalable, impact-driven company positioned at the intersection of profit and purpose.
